DENTSPLY

Hosted by:

G&H Dental Arts, Inc.

To register, see backside for details...

OBJECTIVES:

In this program you will:

- Review the proper denture sequence from start to finish, how to deliver an excellent denture for your patients each and every time.
- Learn the benefits of DENTSPLY's IPN Denture Teeth, when to use different occlusal schemes (cuspid guidance, group function, etc.) based upon each patient's individual needs.
- Using DENTSPLY TruRx™ Digital Denture Prescription allows the selection for the perfect tooth (mould and shade) every time by factoring in patient's skin tone, hair and eye color.
- Allow your patients the ability to play a major role in the final outcome.

COURSE DESCRIPTION:

This course, Digital Technology in Denture Prescriptions, is designed to enhance the dental office team's function and role as esthetic managers for denture patients.

Denture wearers demand and should receive the best possible clinical outcome that optimizes esthetics, phonetics and function. Key to achieving this is the accurate selection of denture teeth moulds and shades. Current systems to facilitate this process are mechanical and under-utilized.

A flexible and efficient combination of a digital denture tooth selection tool and a conventional shade guide enhances clinical outcome and upgrades the practice image. This tool also enables patient "buy-in" to the esthetic reconstruction process prior to the initiation of lab sequences. Enhanced office-laboratory communication is also achieved.

FEATURED SPEAKER: KRISTI K. GREGORY, CDT.

Since 2003, Kristi Gregory has been working for DENTSPLY as a Prosthetics Technical Specialist and possesses over 15 years experience in the dental laboratory field. As an integral part of the DENTSPLY Technical Center in York, Pennsylvania, Kristi's responsibility evolved to also assist in the training of both Dentist and Laboratory Technicians in various aspects of both complete and partial denture procedures. Prior to working for DENTSPLY, Kristi worked as a dental technician at an in-house denture lab where she received firsthand experience working side-by-side with dentists and patients.
