Redefining the Economics of CAD/CAM Dentistry: Achieving Predictable Clinical Outcomes with Digital Impressions

Introducing the 3M™ True Definition Scanner

Digital impression technology provides wide-ranging benefits to both the dentist and patient, providing predictable outcomes through better oral care, a better patient experience and improved productivity.

Finally, there’s an advanced digital impression system that’s feasible and a smart investment for any dental practice—whether well-established or just starting out.

In this presentation we will discuss the benefits of the digital process versus the traditional process, including:

- Optimized workflow options with the 3M™ True Definition Scanner: From your office to our laboratory
- How to view each case in amazing detail and eliminate inaccuracies
- How digital files can enable better communication with our laboratory for better results
- How digital technology transforms the procedure into an interactive, educational experience for the patient
- How seeing images on screen gives patients a true understanding of their oral situation and what is needed
- How digital processes elevate dentistry for you and your staff in ways that can have a profound impact on your practice
- How “3-D-in-motion” video technology supported by an open and secure cloud-based platform to store, share and connect maximizes flexibility and outcomes

Following the lecture, there will be a hands-on demonstration of the speed and full-arch accuracy of a digital intra-oral scanner and how a digital impressioning system will positively impact your practice on a daily basis.

5:30 pm 6:00 pm
Meet and Greet (Light dinner will be provided)

6:00 pm to 7:00 pm
Overview of Digital Impressioning

7:00 pm to 8:00 pm
Practical Demonstration
